plotVR - Walk Through Your Data

Dr. Philipp Thomann

D ONE | EuroPython 2019, Basel, 11. July 2019

About me

- Vita
 - PhD in Probability Theory
 - PostDoc in ML
 - Senior Consultant with D ONE Solutions
- Projects in DataScience, ML, AI, Infrastructure, Visualisation, Coaching
- (Co-)Creator of
 - [liquidSVM](#) - A fast and versatile SVM implementation
 - [Nabu](#) - vocabulary drilling tool
 - [NLPeasy](#) - Easy Peasy Language Squeezy
 - ...and introducing:
[PlotVR](#) - walk through your data

About D ONE Solutions

- Consultancy based in Zurich
- ~ 40 Consultants, a third with PhD
- Consulting in all aspects of data driven value creation
 - Setup DWHs (DataVault 2.0, HELT)
 - Visualisation / Dashboards (Tableau, PowerBI, Qlik, D3, ...)
 - AI/ML/Data Science Projects (Python, R, Microsoft Cognitive Services, ...)
 - Data Science Infrastructure (Jupyter, RStudio Server, Docker, ...)
 - Strategic Consulting
- Investment in StartUps (WinJi, Skunk)
- Supporting Society / Industry with Talks, Education, Interest Groups, ...
- Projects mostly in Switzerland, some also abroad

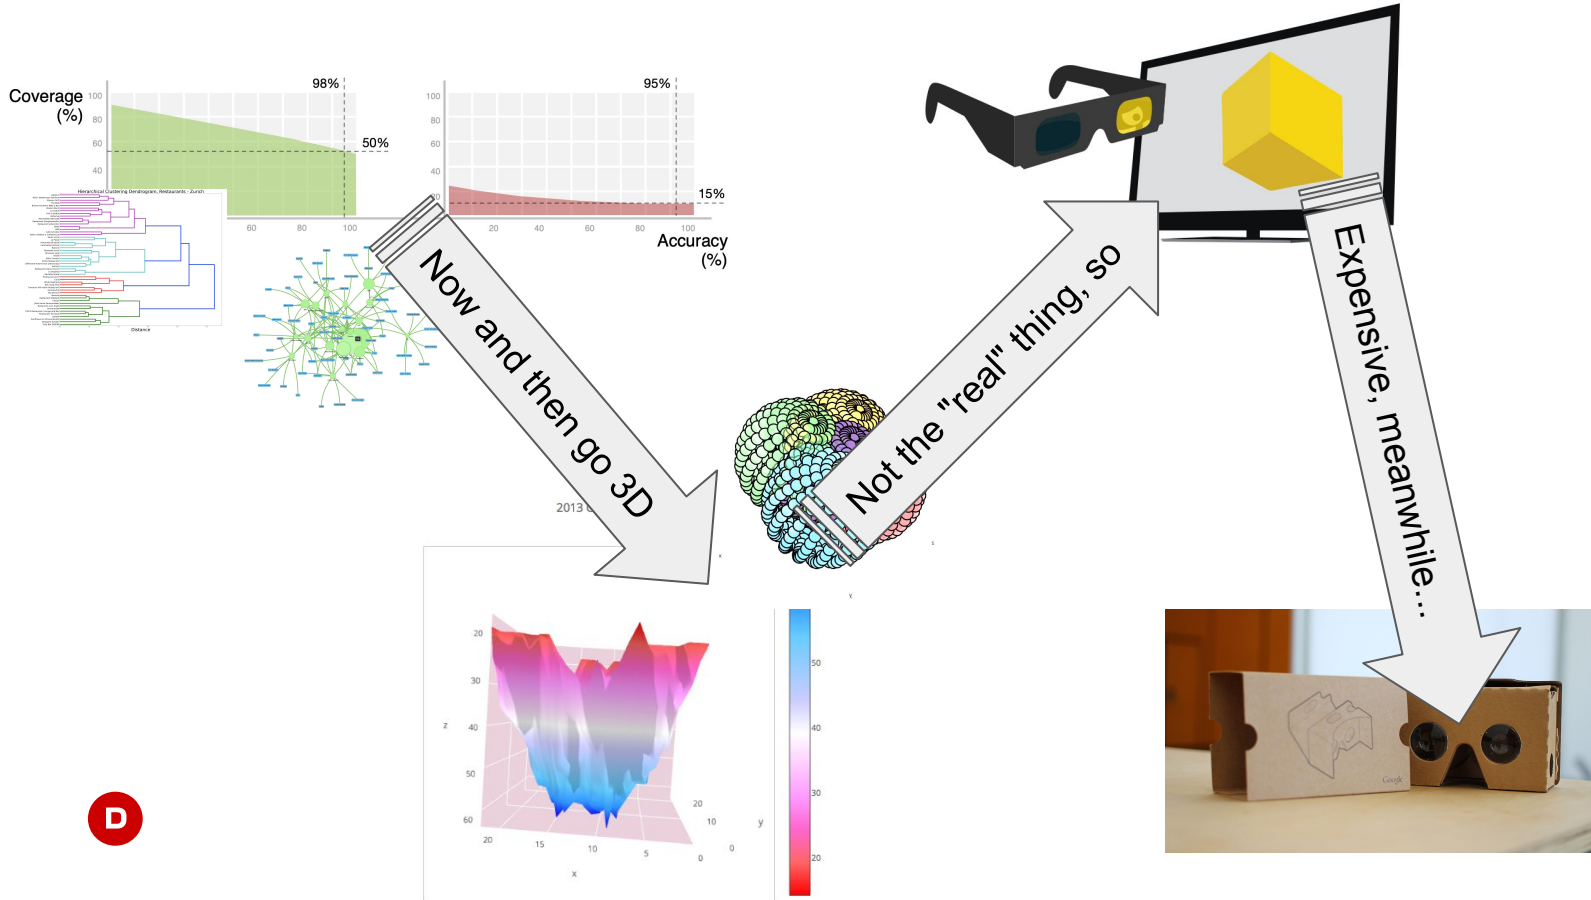

Interested? We're hiring! www.d-one.ai

What is plotVR about?

Data Scientists love to visualise...

But there are some issues to solve here...

- How do we bring the data from the workstation to the mobile device?
- Can we do both VR and AR?
- Can we do it in HTML or do we need an app for that?
- How do we navigate when we are in VR?
- Does it need to cost something?
- Can I create all that in my own free time?

Features Matrix

	VR	AR	3D	Technology	Availability
HTML	✓ (ugly on iOS)	✗ (no nice lib?)	✓	three.js	GitHub
iOS	✓	✓	✓	SceneKit, ARKit, GVR	GitHub
Android	✓	planned	planned	OpenGL, ARCore, GVR	GitHub

Demo

If Demo-Gods are not willing...

```
import plotvr
plotvr.start_server_process()
```

Visit: <http://localhost:2908/index.html>

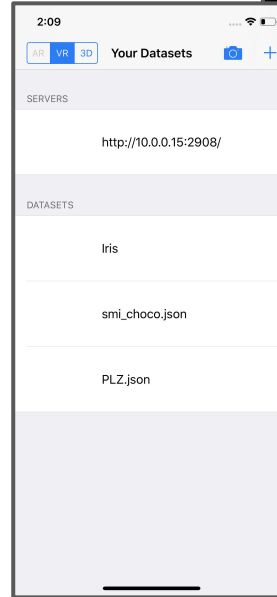

```
from sklearn import datasets
iris = datasets.load_iris()
```

```
plotvr.plotvr(iris.data, iris.target)
```

```
plotvr.controller()
```

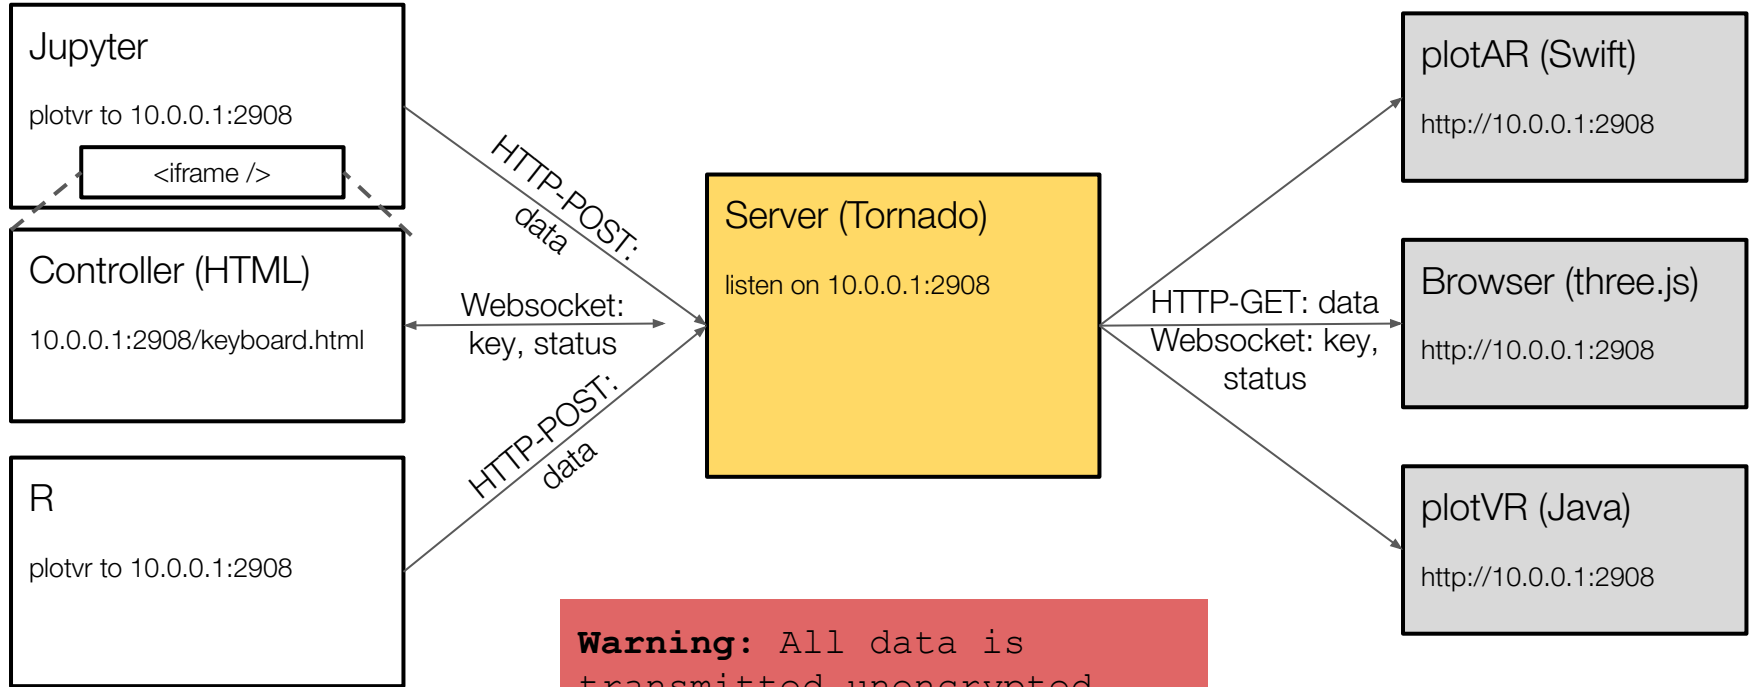

Devices 2, Controllers 5, having focus: 1
<http://localhost:2908/index.html> [Copy](#)

About

Architecture

Warning: All data is transmitted unencrypted and everybody can connect!

Can I haz plotVR?

- Python:
 - `pip install "git+https://github.com/thomann/plotVR#egg=plotvr&subdirectory=plotVR-py"`
- R:
 - `devtools::install_github('thomann/plotVR', subdir='plotVR-R')`
- iOS-App
 - <https://github.com/thomann/PlotAR-ios> (needs XCode and a free personal team)
 - To have you as an early tester: philipp.thomann@d-one.ai
 - Soon via AppStore TestFlight with a shared public link?
- Android-App:
 - <https://github.com/thomann/plotVR-android>
 - <https://github.com/thomann/plotVR-android/releases>

Outlook / Vision

- Add text, lines, surfaces to 3D plots
- Make scenery nicer
- PyPI, CRAN, AppStore, GooglePlay
- Solidify protocol

Ideas:

- HTTPS / Authentification / Authorisation
- User Jupyter-Tornado as server?
- Interface to plotly, ggplot?
- Namespaces on server → central plotVR server, e.g. on cloud/premise

Thanks

- All the giants' shoulders this project stands on:
Cardboard, GVR, ARKit, Jupyter, Tornado, requests, pyqrcode, three.js, ...
- D ONE for being a really cool employer to send me here
- EuroPython for giving me the opportunity to work more on this!
- And all the future contributors to these projects ;-)

LET'S MAKE SENSE
